SQL Developer

Description

Kforce has a client in Houston, TX that is seeking a SQL ETL Developer.
Responsibilities:

- Designing and developing SSIS/SQL ETL solutions to acquire and prepare data from numerous upstream systems for processing
- Builds data transformations with SSIS including importing data from files, moving data from one database platform to another
- Design and develop SQL Server stored procedures, functions, views, and triggers to be used during the ETL process; Test and prepare ETL processes for deployment to production and non-production environments
- Design, implement and maintain database objects (tables, views, indexes) and database security
- Conduct Data flow performance testing and support system and acceptance testing including the development or refinement of test plans
- Support resolution of incidents and execution of approved change requests; Conduct problem root cause analysis and isolate system problems utilizing diagnostic and system management tools (i.e. system dumps and system/component traces, monitoring tools, vendor problem databases)
- Maintain security hardened baseline configurations and deploy security (patches), software maintenance (patches) and new software releases and supporting products infrastructure as directed
- Support the engineering, integration, implementation, and operation of a virtualization strategy to include Database server consolidation, storage consolidation, and automation; Automation includes seamless Database provisioning, and non-disruptive workflow/application/data migrations
- Maintain up-to-date documentation of all procedures, infrastructure diagrams, system configuration and baseline standards, implementation plans, system back out plans, system recovery plans, maintenance plans, system upgrades, and all system changes

Requirements

- Proficient with ETL tools and possesses deep understanding of SSRS and SSIS as well as experience working with SSIS packages
- Strong experience in database performance monitoring and tuning
- Experience performing database consolidation projects and systems integration development
- Knowledge and experience of all other standard SQL Server DBA and SQL developer qualifications
- Experience with hands on development .NET Core-based application in C# in a medium to large environments
- Must possess knowledge and proficiency developing on Microsoft
